Building management by the numbers

42%

of the world's energy is used in buildings.

30%

of energy used in buildings is waste.

50%

of energy used in buildings is wasted due to inefficient building management systems.

Buildings are much more than places where we work and live. They should be reliable, efficient, and comfortable. Transform your building into an intuitive, and more intelligent space with our solution for each types of buildings.

Our solutions

Sustainable office building solutions for people, planet, and profitability

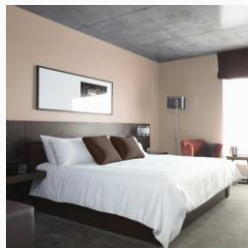

BMS solution for office buildings including consulting, designing and lifecycle services, improve occupant experience, efficiency and sustainability.

We help building operators, corporate occupiers, and their facility teams achieve hyper-efficiency through our digital end-to-end architecture. With solutions that offer operational flexibility, remote operations, and maintenance, facilitate re-entry and cybersecurity, ensure power reliability and maximize net operating income.

Shopping mall of the future is hyper-efficient, sustainable, and resilient

Simplify the complexity of managing a multi-zone portfolio and reduce unnecessary operational costs with our solution that allows you to connect, remotely, monitor, and control your facilities with ease. Digitize and automate processes to save time and unleash value across the entire portfolio from one single integrated platform. With our solution for shopping centers, you can provide unrivalled customer experience and grow the business, while also enhancing operational and energy efficiency.

Delivering hotel technology solutions every day

Hotels are highly complex, energy-intensive environments. Our solution for hotels leverage hotel technology to help hotels achieve operational excellence, drive down energy consumption, and ensure the highest levels of guest satisfaction.

Optimize operations and productivity with integrated systems and connected devices that provide actionable information and enable remote troubleshooting and proactive maintenance; attract and empower employees with a digital work environment that gives them the kinds of connected tools and environment they expect and demand.

Building healthcare facilities of the future, today

EcoStruxure for Healthcare is our future-ready platform for hospitals and healthcare facilities, designed to deliver improved sustainability, resiliency, hyper-efficiency, and people centricity. We help our customers insightfully anticipate and manage the everyday matters and extraordinary events of healthcare.

Every day, our predictive energy management platform automates resources when rooms are unoccupied, the conditions are automatically adjusted to conserve energy.

Our residential offer

Our reliable, efficient, and intuitive technologies help enhance living spaces and the lifestyles of their occupants. We offer a broad portfolio of IOT products that give their owners safety, convenience and a competitive edge.

Our building management system gives you:

Connected Products

Integrate connected products with industry-standard protocols to make your building smart and scalable for future technology expansions.

Edge Control

Ensure simple integration across systems and deliver easy access to the latest devices to keep your building and its occupants safe.

Apps, Analytics & Services

Gain actionable insights to increase your building's performance, efficiency, and reliability and its occupants' comfort.
